

ML GOOGLE SEO NOINDEX

Boost Your PrestaShop SEO Performance & Maximize Google Crawl Budget

Optimize your Google crawl budget and prevent duplicate content issues in your PrestaShop store.

WHY CHOOSE ML GOOGLE SEO NOINDEX?

Stop wasting your Google crawl budget on low-value pages. Every e-commerce store with filters, pagination, or sorting generates thousands of duplicate URLs that confuse search engines and dilute your SEO power.

THE HIDDEN SEO PROBLEM COSTING YOU RANKINGS

Did you know that a typical PrestaShop store with 1,000 products can generate **over 50,000 indexable URLs** from filters alone? Google's crawler has limited time for your site. When it wastes resources on:

- /shoes?page=1, /shoes?page=2, /shoes?page=3...
- /shoes?color=red, /shoes?color=blue, /shoes?size=42...
- /shoes?order=price&color=red&page=2...

...your **actual product pages don't get crawled or indexed properly**. This directly impacts your organic traffic and sales.

THE PROFESSIONAL SOLUTION

ML Google SEO NoIndex implements Google's recommended **noindex, follow** directive on filtered and paginated pages. This tells search engines:

"Don't index this page, but follow the links to discover our real content."

Result: Google focuses 100% of its crawl budget on your money pages — products, categories, and landing pages that actually convert visitors into customers.

BUSINESS BENEFITS

Benefit	Impact
Improved Crawl Efficiency	Google indexes your new products faster
No Duplicate Content Penalties	Avoid ranking dilution across filter variations
Better Organic Rankings	Consolidated link equity on canonical pages
Faster Product Discovery	New arrivals appear in search results sooner
Professional SEO Setup	Enterprise-level configuration in one click

PERFECT FOR:

-  **Large catalogs** (1,000+ products)
 -  **Stores using faceted navigation** (PS Faceted Search, AmazingFilter)
 -  **SEO-focused merchants** wanting to maximize organic traffic
 -  **Multi-language/multi-currency stores** with URL variations
 -  **Agencies** managing multiple PrestaShop clients
-

KEY FEATURES

- ✓ **One-Click Installation** — Works immediately with smart defaults
 - ✓ **Granular Control** — Enable/disable noindex per parameter type
 - ✓ **PS Faceted Search Integration** — Automatic detection and handling
 - ✓ **AmazingFilter Support** — Full compatibility with /f-* URLs
 - ✓ **HTTP Header + Meta Tag** — Double protection for all crawlers
 - ✓ **Custom Parameters** — Add your own filter parameters
 - ✓ **Zero Performance Impact** — Lightweight, no database queries
 - ✓ **PrestaShop 1.7 – 9.0** — Future-proof compatibility
-

WHAT DOES THIS MODULE DO?

When Google crawls your online store, it has a limited "crawl budget" — the number of pages it will scan before moving on. If Google wastes time crawling filtered, paginated, or sorted versions of the same category page, your important product pages may not get indexed properly.

ML Google SEO NoIndex tells Google to skip indexing these low-value pages while still following the links on them. This means:

-  Your main category and product pages get indexed
-  Filtered/sorted variations are ignored by Google
-  No duplicate content penalties
-  Better use of your crawl budget

WHICH PAGES ARE AFFECTED?

The module can add "noindex" to pages with:

Page Type	Example URLs
Pagination	/category?page=2, /category?p=3
Sorting	/category?order=price, /category?orderby=name
Currency changes	/product?id_currency=2
Search results	/search?s=keyword
Price filters	/category?price_min=10&price_max=50
Items per page	/category?n=48
PS Faceted Search filters	Attribute and feature filter combinations
AmazingFilter	/category/f-color-blue/
Tracking parameters	?utm_source=google, ?gclid=... (optional)

WHY IS THIS IMPORTANT FOR SEO?

THE PROBLEM

Without this module, Google may index thousands of nearly identical pages:

- `/shoes?page=1`
- `/shoes?page=2`
- `/shoes?order=price`
- `/shoes?order=name&page=2`
- `/shoes?color=red&size=42`

This creates **duplicate content** and wastes your crawl budget on pages that don't bring value.

THE SOLUTION

This module adds a simple instruction to these pages telling Google:

"Don't add this page to your search results, but feel free to follow the links here."

Your main pages remain indexed, and Google focuses its resources where they matter.

COMPATIBILITY

- **PrestaShop:** 1.7.x – 9.0.x
- **PS Faceted Search:** Fully supported
- **AmazingFilter:** Fully supported

CONFIGURATION

After installation, go to **Modules > Module Manager**, search for "ML Google SEO NoIndex" and click **Configure**.

GENERAL SETTINGS

Option	Description	Default
Enable Module	Master switch to turn on/off all noindex functionality	Enabled
Use HTTP Header	Also sends X-Robots-Tag: noindex, follow HTTP header in addition to the meta tag. Some crawlers prefer headers over meta tags.	Disabled

STANDARD PRESTASHOP PARAMETERS

Option	What it does	Default
Pagination	Adds noindex to paginated pages (?page=2, ?p=3 , etc.)	Enabled
Order & Sort	Adds noindex when products are sorted (?order=price, ?orderby=name)	Enabled
Currency	Adds noindex when currency is changed (?id_currency=2)	Enabled
Search Results	Adds noindex to search result pages (?s=keyword, ?search_query=)	Enabled
Price Range Filters	Adds noindex to price-filtered pages (?price_min=10&price_max=50)	Enabled

Option	What it does	Default
Items Per Page	Adds noindex when items per page is changed (?n=48)	Enabled

FILTER MODULE INTEGRATION

These options appear automatically when the corresponding module is installed:

Option	When it appears	What it does
PS Faceted Search	When <code>ps_facetedsearch</code> is active	Adds noindex to attribute/feature filter combinations
AmazingFilter	When <code>amazzingfilter</code> is active	Adds noindex to AmazingFilter URLs (/f-color-blue/, ?af=)

ADVANCED OPTIONS

Option	Description	Default
Tracking Parameters	Adds noindex to URLs with UTM or ad platform parameters (<code>utm_source</code> , <code>gclid</code> , <code>fbclid</code> , etc.). Disable this if you already use canonical tags — they handle tracking parameters better.	Disabled
Custom Parameters	Add your own URL parameters that should trigger noindex. Enter one parameter per line, without <code>?</code> or <code>=</code> . Example: <code>my_custom_filter</code>	Empty

RECOMMENDED CONFIGURATION

For most stores, the default settings work well:

1.  Keep **Enable Module** on
2.  Keep all **Standard Parameters** enabled
3.  Enable **PS Faceted Search** or **AmazingFilter** if you use them
4.  Leave **Tracking Parameters** disabled (canonical tags handle these better)
5.  Add any custom filter parameters your theme uses

BEST PRACTICES

- **Keep pagination noindex enabled** — This is the most important setting
- **Leave tracking parameters disabled** if you already use canonical tags
- **Monitor Google Search Console** to see crawl improvements after installation

SEE RESULTS IN GOOGLE SEARCH CONSOLE

After installing ML Google SEO NoIndex, monitor your improvements in Google Search Console:

1. **Coverage Report** — Watch "Excluded" pages increase (filtered URLs correctly excluded)
2. **Crawl Stats** — See crawl requests focus on important pages
3. **Index Coverage** — More product pages indexed vs. filter variations
4. **Performance** — Track organic traffic improvements over 2-4 weeks

Most merchants see measurable crawl efficiency improvements within 1-2 weeks of installation.
